DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 57-79, drawn to a method of inducing posterior vitreous detachment of an eye, classified in class 424, subclass 94.64.
- II. Claims 80-84, drawn to a method of performing a vitrectomy, classified in class 604, subclass 521.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are distinct inventions and thus are subject to restriction. The inventions are distinct processes in that the methods are intended for different populations and have different functions, modes of operation, and effects. In the instant case the method of invention I is intended as a method of prevention, the procedure is intended for subjects that have begun to experience posterior vitreous detachment or are at threat of experiencing posterior vitreous detachment, but have not yet experienced difficulties requiring a vitrectomy, due to failure of the vitreous to completely separate from the retina. The method is intended to induce complete detachment of the vitreous so as to prevent the need for a surgical vitrectomy. Alternatively, the method of invention II is intended as a method of treatment for those who have experienced posterior vitreous detachment and now have complications due to failure of the vitreous to completely separate from the retina, therefore now in need of a vitrectomy. Therefore, the methods are intended for different populations, and have different functions, modes of operation (as the method of invention II requires a vitrectomy), and have different effects.

Therefore, a search and examination of all inventions in one patent application would result in an undue burden. These inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, different classifications, and a search

for one group does not require a search for another group, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

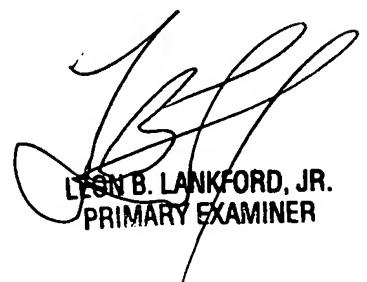

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
